

and the fact that the patient is not  
 suffering from any other disease  
 is a strong argument in favor of  
 the diagnosis of a simple  
 febrile reaction to the  
 infection. The patient's  
 condition is not serious and  
 the prognosis is good. The  
 patient should be kept in bed  
 and given plenty of fluids.  
 The temperature should be  
 watched and the patient  
 should be kept comfortable.  
 The patient should be given  
 plenty of rest and should  
 not be allowed to get up  
 until the fever has  
 subsided. The patient  
 should be given plenty of  
 fluids and should be  
 kept comfortable. The  
 patient should be given  
 plenty of rest and should
