

1	2	3	4	5	6	7	8	9	10
10	20	30	40	50	60	70	80	90	100
100	200	300	400	500	600	700	800	900	1000
1000	2000	3000	4000	5000	6000	7000	8000	9000	10000

The following table shows the results of the experiment. The first column represents the number of trials, and the second column represents the number of successes. The third column represents the probability of success, and the fourth column represents the standard deviation.

The results of the experiment are as follows:

Number of trials	Number of successes	Probability of success	Standard deviation
10	6	0.6	0.48
20	12	0.6	0.48
30	18	0.6	0.48
40	24	0.6	0.48
50	30	0.6	0.48
60	36	0.6	0.48
70	42	0.6	0.48
80	48	0.6	0.48
90	54	0.6	0.48
100	60	0.6	0.48

The results of the experiment show that the probability of success is constant at 0.6, and the standard deviation is constant at 0.48. This is consistent with the theoretical results of the binomial distribution.

The following table shows the results of the experiment. The first column represents the number of trials, and the second column represents the number of successes. The third column represents the probability of success, and the fourth column represents the standard deviation.

The results of the experiment are as follows:

Number of trials	Number of successes	Probability of success	Standard deviation
10	6	0.6	0.48
20	12	0.6	0.48
30	18	0.6	0.48
40	24	0.6	0.48
50	30	0.6	0.48
60	36	0.6	0.48
70	42	0.6	0.48
80	48	0.6	0.48
90	54	0.6	0.48
100	60	0.6	0.48

The results of the experiment show that the probability of success is constant at 0.6, and the standard deviation is constant at 0.48. This is consistent with the theoretical results of the binomial distribution.
