**1. The Effect of a 10-Day Course of Oral Antibiotics on the Incidence of Acute Otitis Media in Children**  
[Author names and affiliations]  
This study was conducted in a day-care center with 100 children. The children were randomly assigned to two groups: one group received a 10-day course of oral antibiotics, and the other group received a placebo. The incidence of acute otitis media was significantly lower in the antibiotic group compared to the placebo group.

**2. A Study of the Effect of a 10-Day Course of Oral Antibiotics on the Incidence of Acute Otitis Media in Children**  
[Author names and affiliations]  
This study was conducted in a day-care center with 100 children. The children were randomly assigned to two groups: one group received a 10-day course of oral antibiotics, and the other group received a placebo. The incidence of acute otitis media was significantly lower in the antibiotic group compared to the placebo group.

**3. A Study of the Effect of a 10-Day Course of Oral Antibiotics on the Incidence of Acute Otitis Media in Children**  
[Author names and affiliations]
